The problem of your life is dealt with the manner in which we must make the transition along the line of thought through the descendants of the thinkers of those who would be in an artistic company. What do you think of the Indian? I would like to learn what you think concerning the matter. We are all a part of this world and we are all equally.

London 1890
The peninsula of Yucatan is dotted with the monumental ruins of a dead cult, it still survives with the descendants of the builders of those memorials, an athletic barefoot race docile and intelligent and simple still Indians.

History is asked to tell us what was the course of development up to the closing episode of this cult and what we query not in vain as to what has followed to date.

The type is a doubtful one. It is today well marked and the individual of Spanish blood can be selected with almost as much ease as he who has negro blood in the U. S.

In Figure short (5ft.) strong bodied arms and legs short and strongly knit, tapering, feet, head etc.

Habits, alert, active industrious small because of small environment, loyal clean, cheerful.

Pyramid of Kamaum is similar masses of few miles south of Mexico.

On train to St. Augustine.

Got up as the train moved out of Savannah; struck at once the long lands with fines & ground

& cypress bps. - a wide - a vast

Bastille river with tremendous

muddy waves. No decent drayway

between Savannah & Jacksonville.

Train late + train to St. Augustine

missed. all mode. Handled a

telegraph, saying boat was at

Jacksonville - set off there. Great

relief. on board boat by

one o'clock + by three settled
down for the voyage

Armier Williams & McQueen return

from St. Augustine at night.
See 21st, Saturday

Got up early to find the "Stina" already in motion and leaving Jacksonville behind. We were on our way down the St. Johns - a broad lake like body of water bordered by gray green forests with but little elevation save a few low knoll like elevations. We passed a great square town on the right and an occasional cluster of houses.

The water coffee colored few boats.

Soon we saw the white sand shores of the outlet ahead and the village of Mayville with its light house and clusters of houses with clumps of trees scattered over the great banks of white sand.
Dec. 21st. Saturday.

Dropping the pilot we set our course seaward through the angry looking line of breakers which we passed with the rather unpleasant sensation of sinking. The bar three times in succession as the brine hit us down to pronounced depths.

In a few minutes we were looking back at the white beaches and turning to the south began the long trudge of coasting the East coast of Florida. The scene was one of their was a fine roll and by late afternoon Dr. Willoughby's own self were feeling well off the mad dash.

It was a superb sail down the shore of Florida, clearing the really endless blue sea without bordered on the right by the long even line of beach, most of the horizon, the blue sky was a few of playing surf than the even bank of beach with a line of darker seaweed than a bank, rising some 15 or 20 ft. marked above by the salt-bush and vegetation, large trees, evergreen and palm among messes with navy out there a few coconut palms and the small hardy palmetto, there in some just above faded off into the gray horizon and the blue sea at the mouth of the 50 mph winds, spitting the wind, I was determined to lose sight of land well lighted by the morning sun and indications of the presence of ocean, here
are collapse fairly hidden in the foliage. There are large orange phallics at the lake with a great massive yellow Royal Parachute Bulldog brass eagle at the base, and nationwide trends with nearby looking little giant fowl.
Approaching Havana

My Dear Kate

It is the day before Christmas but no snow

Summer day is overhead and

a warm blue sea beneath

as we approach the high

point with its castellated
buildings close under the
harbour & city.
Promenading with the Colonel

Tomorrow is Christmas, and
today is as fine a summer day
as we could wish.
Dec 24th, Approaching Havana Morning claimed on us in the Florida Straits almost midway between the Florida Keys and Cuba, our direction being about as if cast off in a longboat come from the rounded town line S of Key West. We are on the coast of the gulf stream & the water is dark blue & gue, in a slight roll now & then. The sky is fair with small puffy clouds clustered about.

All about ten this long took time of the Cuban ridge began
Dec 24

To appear at the left and at eleven the castle and fort outside of it lay way in arctic. The Island front presents a bulky irregular not high in form, but each form of higher water, a little back. There are forests and fields with. Huts and houses here and there almost throughout, and glimpses of beach and Strait can be heard on the approach. I can observe down the Strait, there are also buildings on the gentle hills and extensive structure, perhaps fortresses.
MENDA  Dec. 29th

A most interesting day spent in Mendia. Left the jack with Alum. J. H. Marquand & millpeople by the little launch, landed for the first time in Juanita, passed along the long wooded shore, the sand beach to the charter house, thence past the light house to the R.R. Station. The crews of American made cars was ready and we passed out through the village with it, primitive thatched huts. Across this country held by the rocky waste covered with low trees & bushes where many flowers, mainly Eumolpus, were seen. Presently the sand, green fields, fields
and the haciendas nestled among clusters of palmas and other rich trees. In many the features of greatest interest are the town with its narrow, rather regular streets, its Spanish houses, the glimpses of balconies, the grand windows, balconies, the markets with the interesting people, the fruits and native products sold at the arched alcoves with shades of matting and rags protecting the people from the sun. Above all the people themselves with their white garments and loads of marrakeg.

It was Sunday morning and all
...but a little dressed up and through the market we went. There was little else going on and the people were in a measure at leisure. All were quiet and placable. We wandered about often in crowded places, sketching and photographing.

Saw back up the market and jail by the Old Church. Which once contained an ancient archway. A great bit deep into the hill of an immense mound on which the jail and church and a great ruined wall once stood. The man, however, seems to be of Spanish...
Mondays, although Thompson says that

Progress

From whence the rocky surface slopes down gradually to the sea level at progress. Indeed opposite of progress there is a belt of submerged land inclosed by the heavy bar on which the city is built. There appears to be an outcrop of the limestone on the gulf point some a low point hardly above tide near the site of Eastern part of the town. The brink of dunes rise some 15 feet above mean tide.

Back of the town on the margin of the salt marsh and near the point cut by the R.R. is a considerable mound of earth approximately 15 feet.
Progress 2

Hidden in a compact town a village
of palmstone date. As is said
that former times there were stone walls
visible in places indicating permanent
inhabitancy, but now the many a
palm referee - dark earth filled
with countless broken sea shells,
the refuse of past supply, and
potsherds and stone implements. A
Gnu is a low rounded mound
of irregular outline 200 to three
hundred ft in diameter, and as
shown by a section recently made
in filling up a low site is
up to more feet high in the
Centre. Many fragments of ones...
Of the prevailing Yacate types were picked and thrown scaling lines, edge beads, stone hammers, and occasional flaked stone axe heads. On the west side of the R.I. is a similar mound occupied by houses, it is stated by Mr. Thompson that other like mounds occur farther west and it is not unlikely that the whole coast is strewn by like midden relics of the Gulf Coast fishermen of the other time.
